

Olympus — Agent Go-Live Requirements

Every agent's external dependencies, plus what it takes to launch Aurora / STRT Collective for real.

Prepared for Aurora · STRT Collective | September 21, 2026

This is the honest inventory: what each of the 24 Olympus agents needs to actually run, what's already wired up and ready, what still needs a key or an account, and — just as important — what you asked for that hasn't been built yet. Nothing here is assumed working unless it's been coded and tested.

The One Key That Unlocks Most of This

ANTHROPIC_API_KEY powers the drafting, extraction, and analysis behind 20 of the 24 agents below — it is by far the single highest-leverage thing to set up first. Get one at **console.anthropic.com** → API Keys, and set **ANTHROPIC_MODEL=claude-sonnet-5** alongside it.

Core Company-Wide Setup

Do these once, at the account/company level — not per client.

Variable	What it powers	Where to get it	Required?
ANTHROPIC_API_KEY	Drafting & analysis across nearly every agent	console.anthropic.com	Required
APOLLO_API_KEY	Hermes — lead sourcing	apollo.io → Settings → API	Required for Hermes
GMAIL_SENDER_EMAIL + OAuth (credentials.json / token.json)	All real sending + every digest/alert email (Peitho, Iris, Echo, Argus, Chronos, Hephaestus)	Google Cloud project → OAuth client; run scripts/gmail_auth.py once	Required for sending
CALENDLY_BOOKING_LINK + CALENDLY_WEBHOOK_SIGNING_KEY	Booking link in outreach; webhook logs booked meetings	calendly.com account settings	Required for booking
OWNER_EMAIL	Who receives digests & system alerts	—	Required
OWNER_UI_USERNAME / OWNER_UI_PASSWORD	Bootstrap login (first run only)	You choose it	Required once — rotate after

Variable	What it powers	Where to get it	Required?
APP_SECRET_KEY	Signs session cookies	Generate a real random string	Required — never "change-me"
DATABASE_URL	Where all data lives	Defaults to SQLite — see warning below	See warning
GOOGLE_PLACES_API_KEY	Optional review-count check (Momus, Aletheia)	Google Cloud Console	Optional
OWN_DOMAIN	Aletheia — runs Momus's own checks against your site	Your domain	Optional, recommended
GOOGLE_ADS_DEVELOPER_TOKEN / META_ACCESS_TOKEN	Live ad publishing (not built — see gaps)	Each platform's developer app review	Not required yet

Per-Agent Requirements

All 24 agents, what each one needs to actually function, and its status today. “Ready” means it works the moment the core keys above are set — no extra work.

Agent	Role	Needs	Status
Hermes	Sourcing	APOLLO_API_KEY. (Vibe Prospecting sourcing is person-run — no key needed, but requires a human in a Claude session with that connector.)	Needs setup
Momus	Broken-funnel scanner	Nothing required. GOOGLE_PLACES_API_KEY optional for review-count checks.	Ready
Peitho	Outreach + conversation	ANTHROPIC_API_KEY + Gmail OAuth for email. Twilio (SMS/calls) + ElevenLabs (voice) requested but NOT built yet.	Not fully built
Themis	Client intake	ANTHROPIC_API_KEY.	Ready
Philotes	Referrals	ANTHROPIC_API_KEY.	Ready
PHEME	Ads planner	ANTHROPIC_API_KEY for the brief. Live publishing needs Google Ads/Meta dev tokens — not built yet, brief-only by design.	Ready

Agent	Role	Needs	Status
Athena	Measurement + content	ANTHROPIC_API_KEY.	Ready
Iris	Notifications	Gmail OAuth (same credentials as Peitho).	Needs setup
Demeter	Client onboarding	Nothing required — internal checklist logic only.	Ready
Plutus	Billing reminders	Nothing required — flags invoices internally, no payment processor wired in.	Ready
Echo	Reviews & reputation	ANTHROPIC_API_KEY. No review-platform API is wired in — nudges and drafts replies only.	Ready
Nike	Case studies	ANTHROPIC_API_KEY.	Ready

Agent	Role	Needs	Status
Metis	Meeting prep	ANTHROPIC_API_KEY.	Ready
Dike	Proposals & contracts	ANTHROPIC_API_KEY.	Ready
Argus	Deliverability watch	Gmail OAuth (reads send volume & token health).	Needs setup
Eris	Competitor watch	ANTHROPIC_API_KEY.	Ready
Persephone	Win-back	ANTHROPIC_API_KEY.	Ready
Aletheia	Self-audit	OWN_DOMAIN set. Optional GOOGLE_PLACES_API_KEY.	Needs setup

Agent	Role	Needs	Status
Chloris	Creative fatigue watch	Nothing required — reads AdCampaign age internally.	Ready
Nemesis	Churn early-warning	Nothing required — reads client contact recency internally.	Ready
Astraea	Pricing benchmark	ANTHROPIC_API_KEY.	Ready
Chronos	Monthly ops rollup	Gmail OAuth (same as Peitho/Iris).	Needs setup
Hephaestus	System health	Gmail OAuth for alert emails. Checks all other agents' config & run history automatically.	Needs setup
Charon	CRM handoff	ANTHROPIC_API_KEY, plus each client's own CRM key (HubSpot / Monday.com / GoHighLevel) set on their client page.	Needs setup

Per-Client Setup — Charon / CRM Sync

Unlike the keys above, CRM credentials are set **per client**, on that client's own page in Olympus (not in the app's global config) — each client uses their own CRM account, not yours.

Provider	What's needed
HubSpot	An API key only — client's HubSpot: Settings → Integrations → Private Apps → create one with <code>crm.objects.contacts</code> scopes.
Monday.com	API key + board ID + a column map (JSON). Client's Monday: avatar → Admin → API → generate token.
GoHighLevel	API key + location ID. Client's HighLevel: Settings → Private Integrations → contacts read/write scopes.

Known Gaps — Read Before You Rely On These

Peitho: Twilio + ElevenLabs (voice & SMS)

Requested, but not built. Peitho is email-only today. To add it: a Twilio account + phone number (SMS/voice), an ElevenLabs API key + a selected/cloned voice, and new code — *app/integrations/twilio.py*, *app/integrations/elevenlabs.py*, and a voice-channel service wired into the same approval queue email uses today. Say the word and I'll scope and build it.

Live ad publishing (Pheme)

Google Ads / Meta integration is stubbed, not real — Pheme drafts the full campaign brief for you to paste into each platform by hand. Real publishing needs each platform's developer app review first, which takes its own time independent of anything here.

SQLite on most hosting platforms

The default DATABASE_URL is a SQLite file. Railway/Render/Fly containers have an **ephemeral** filesystem by default — without a persistent volume or a managed Postgres add-on, every redeploy wipes all leads, clients, and CRM sync history. Attach a volume or switch DATABASE_URL to Postgres before real client data goes in.

The bootstrap login

aurastrtcollective@proton.me / 12345678 is a throwaway password, seeded once to get you in. Rotate it — or better, create named accounts per teammate from the Users page and retire this one — before real client data touches the app.

STRT Collective site domain

Currently a private Claude artifact link, not yet served from strtcollective.com — the page's own meta tags (canonical URL, Open Graph) already reference that domain, so either point it there or update those tags to match wherever it actually ends up hosted.

Google Analytics placeholder

The site's tracking snippet uses a placeholder ID (G-XXXXXXXXXX) — swap in a real GA4 measurement ID before relying on any traffic data.

Social links

Footer links point to @aurastrtcollective (Instagram) and @strtcollective (TikTok) — confirm both handles are actually claimed and live before this goes out broadly.

Privacy Policy / Terms of Service

Both are explicitly marked on the page itself as a good-faith template, not a substitute for legal review. The Terms' governing-law state is still a literal placeholder (“[Your State]”). Get an attorney to review both before a real client signs against them.

Quick-Start Checklist, In Priority Order

1. Get ANTHROPIC_API_KEY — unlocks 20 of 24 agents immediately.
2. Set up Gmail OAuth (scripts/gmail_auth.py) — unlocks real sending and every digest/alert email.
3. Get APOLLO_API_KEY — unlocks Hermes sourcing.
4. Set CALENDLY_BOOKING_LINK + CALENDLY_WEBHOOK_SIGNING_KEY — unlocks the booking flow.
5. Generate a real APP_SECRET_KEY and rotate the bootstrap owner password.
6. Attach persistent storage (a volume, or managed Postgres) before real client data goes in.
7. Point strtcollective.com at the marketing site, or update its meta tags to match its real home.
8. Decide on Twilio + ElevenLabs for Peitho's voice/SMS channel — tell me and I'll scope and build it.
9. As each client signs, set their CRM connection on their client page (Charon).

This document reflects the codebase as of September 21, 2026 — regenerate it after any change to what an agent needs or what's been built.
